Control

In the Control & Physics 1 Menu clicke now on Save Look...

Now put in a name in the textfield, in this case My First Look
Then click on Save

Take now a good picture for your preset and it will be saved

If you are now in a scene and want to change the look of a model, you can do this very easy

Select the Model whose look you want to change

Make sure you are in the control Tab, then click on Select Root on the top

Open again the Control & Physics 1 Tab, and click this time on Load Look...

You can type in a search text in the right upper corner, to find your look easier, especially if you have a lot of look in here
In my scene there is actually the Girl with the appearance (My first look 01), i saved a second look (My first look 02) and want now to change the appearance to this second look. So just click on the look you want to load, in this case My first look 02 and the appearance of the model will change to that look

You also can click on the Settings Button and activate Use As Template, Hide it, order mark it as Favorite Or you can Rename it or Delete it

Above the the preset pictures you see the options Show Hidden and Only Favorites you can activate With this you can make presets visible who are marked as Hide Or show only the presets who are marked as Favorite

The appearance of the Model has now changed from My first look 01 to My first look 02
